nhanph.github.io ◇ nhan.ph0407@gmail.com ◇ (775)-501-2570

## RESEARCH INTERESTS

- ◊ Stochastic methods for machine learning, deep learning, reinforcement learning, and federated learning
- ◊ LLM-based solutions for enterprise data management applications

## EDUCATION

### Ph.D. in Operations Research

*Department of Statistics and Operations Research*

*University of North Carolina at Chapel Hill · Chapel Hill, NC, USA*

2017–2021

### Graduate Study in Computer Engineering

*Department of Computer Science and Engineering*

*University of Nevada, Reno · Reno, NV, USA*

2015–2017

### Bachelor of Engineering (Honor Program) in Computer Engineering

*Department of Computer Science and Engineering*

*Ho Chi Minh City University of Technology · Ho Chi Minh City, Vietnam*

2008–2013

## INDUSTRY EXPERIENCES

### Staff Research Scientist

2024–Present

*IBM Research, Thomas J. Watson Research Center · Yorktown Heights, NY*

### Research Scientist

2022–2024

*IBM Research, Thomas J. Watson Research Center · Yorktown Heights, NY*

### Summer Machine Learning Intern

2021

*Blue River Technology Inc. · Sunnyvale, CA*

### Summer Research Intern

2020

*IBM Research, Thomas J. Watson Research Center · Yorktown Heights, NY*

## RESEARCH EXPERIENCES

### Automation for Enterprise Data Management

Dec. 2023–Present

*Building an end-to-end system for text-to-SQL using Large Language Models (LLMs).*

- ◊ Experiments with both in-context learning and finetuning LLMs for individual tasks such as schema linking and SQL generation.
- ◊ Curate training and evaluation datasets from open-source and enterprise usecases.
- ◊ Develop reasoning capability for text-to-SQL models.
- ◊ Achieved top ranking on BIRD leaderboard.
- ◊ Core developer of NL2Insights: an automated pipeline for text2SQL.
- ◊ Enable Text2SQL service in IBM watsonx.data intelligence.

### Table metadata to business glossaries mapping

Mar. 2023–Jan. 2024

*Leveraging LLMs to design generic methods for matching table metadata with business glossaries.*

- ◊ Leverage LLMs to design generic matching methods that do not require manual tuning and can identify complex relations between column names and glossaries.
- ◊ Propose methods that utilize LLMs in two ways: generating additional context for column names that can aid with matching and using LLMs to directly infer if there is a relation between column names and glossary description.
- ◊ Experimenting with different reward functions for reinforcement learning (RL) fine-tuning for Column-to-Concept mapping use-case.

### Automated Decision Optimization

Jan. 2022–Mar. 2023

*An end-to-end automated system to solve sequential decision-making problems.*

- ◊ Design the application framework and system architecture for data and knowledge-driven Automated Decision Optimization ((AutoDO)).
- ◊ Demonstrate, benchmark, and experiment for effectiveness and solution quality from AutoDO.
- ◊ AutoDO is available on IBM API Hub portal.

**Evaluating Robustness of Cooperative MARL: A Model-based approach** Jul. 2021–May 2023  
Joint work with: Dr. Lam M. Nguyen, Dr. Jie Chen, Dr. Hoang Thanh Lam, Dr. Subhro Das, and Dr. Tsui-Wei Weng.  
Accepted for the 2023 IEEE International Conference on Data Mining (ICDM), [eprint](#).

- ◊ Propose the first model-based adversarial attacks, called cMBA, for cooperative multi-agent reinforcement learning by solving a constrained nonconvex optimization problem at every timestep.
- ◊ Propose a new victim agent selection strategy which has not been considered in previous works.
- ◊ Conduct experiments on multi-agent MuJoCo environments.

**Federated Learning with Randomized Douglas-Rachford Splitting Methods** Aug. 2020–Jun. 2021  
Graduate Research Assistant, Supervisor: Dr. Quoc Tran-Dinh, Dr. Lam M. Nguyen.  
Accepted for the 35th Conference on Neural Information Processing Systems, [eprint](#).

- ◊ Propose two new algorithms, FedDR and asyncFedDR, to solve finite-sum nonconvex problems in federated learning by combining Douglas-Rachford splitting, randomized strategy, and asynchronous update.
- ◊ Achieve best-known communication complexity and handle data heterogeneity.
- ◊ Conduct experiments on federated learning examples using synthetic and real datasets.

**Regression Optimization for System-level Production Control** Jun. 2020–Aug. 2020  
IBM Research Intern, Supervisor: Dr. Roman Vaculin, Dr. Dzung T. Phan, Dr. Lam M. Nguyen.  
Accepted for the 2021 American Control Conference (ACC).

**Stochastic Gauss-Newton Algorithms for Nonconvex Compositional Optimization** Sept. 2019–Feb. 2020  
Graduate Research Assistant, Supervisors: Dr. Quoc Tran-Dinh, Dr. Lam M. Nguyen.  
Accepted for the 37th International Conference on Machine Learning, [eprint](#).

- ◊ Propose two new Stochastic Gauss-Newton algorithms to solve stochastic nonconvex compositional problems that use both classical stochastic and SARAH estimators for function values and Jacobian estimators.
- ◊ Give first stochastic Gauss-Newton algorithm with global complexity analysis.
- ◊ Conduct numerical experiments on two examples: stochastic nonlinear equations and asset allocation problem.

**Regularization Techniques on Deep Learning** Sept. 2019–Dec. 2019  
SAMSI Research Fellow, Supervisor: Dr. Quoc Tran-Dinh.

- ◊ Study the principle of different regularization techniques on training Deep Neural Networks (DNNs).
- ◊ Conduct numerical experiments on different DNN models consisting two or more regularizers on both model parameters (e.g.,  $\ell_2$ -norm, max-norm constraint, etc.) and training process (dropout, batch normalization, etc.).

**Hybrid Stochastic Policy Gradient Algorithm for Reinforcement Learning** Jul. 2019–Dec. 2019  
Graduate Research Assistant, Supervisors: Dr. Quoc Tran-Dinh, Dr. Lam M. Nguyen.  
Accepted for the 23rd International Conference on Artificial Intelligence and Statistics (AISTATS 2020), [eprint](#).

- ◊ Propose new biased policy gradient estimator from REINFORCE/GPOMDP and adopted SARAH estimators and use it to derive first algorithm that has convergence guarantee to solve a composite policy optimization problem in reinforcement learning.
- ◊ Prove proposed algorithm achieves best-known convergence rate over existing methods and conduct experiments to verify the advantage using OpenAI gym environments.

**Hybrid Optimization Framework for Composite Nonconvex Optimization** Feb. 2019–Aug. 2019  
Graduate Research Assistant, Supervisors: Dr. Quoc Tran-Dinh, Dr. Lam M. Nguyen.  
Accepted for Mathematical Programming, [eprint](#).

- ◊ Introduce a new stochastic gradient estimator that combines SGD and SARAH estimators and use it to develop a new algorithm for composite nonconvex optimization problems which achieves best-known convergence rate.
- ◊ Verify the effectiveness of the proposed algorithm via numerical experiments using Python and Tensorflow.

**ProxSARAH: A Framework for Stochastic Composite Nonconvex Optimization** Aug. 2018–Feb. 2019  
Graduate Research Assistant, Supervisors: Dr. Quoc Tran-Dinh, Dr. Lam M. Nguyen.  
Accepted for Journal of Machine Learning Research (JMLR), [eprint](#).

- ◊ Develop new stochastic algorithm for composite nonconvex optimization problems which utilizes existing SARAH estimator and achieves the best-known convergence rate.
- ◊ Conduct numerical experiments to illustrate advantage of proposed algorithms on three examples: Non-negative PCA, classification with 3 nonconvex losses, and neural network training using Python and Tensorflow.

Graduate Research Assistant, Supervisor: Dr. Hung M. La.

In Proceedings of the 54th Annual Allerton Conference on Communication, Control, and Computing, [eprint](#).

In Proceedings of the 2017 IEEE International Conference on Robotics and Automation (ICRA), [eprint](#).

The 33rd International Symposium on Automation and Robotics in Construction and Mining (ISARC), [eprint](#).

- ◊ Propose four-wheeled robot for steel bridge inspection with permanent magnets embedded inside each wheel equipped with different type of sensors: visual camera, 3D sensor, IMU for localization and mapping purposes.
- ◊ Build controller unit with minicomputer (Intel NUC) running Robot Operating System communicating with low-level controller (Arduino-based) for sensory data collection, implement sensor fusion and mapping algorithms.

### AAAI 2023 Tutorial and Lab Organizer

Feb. 2023

Title: *Automated AI For Decision Optimization with Reinforcement Learning*.

## INVITED TALKS

---

### MIT-IBM Guest Seminar

Jul. 2021

Title: *Stochastic Recursive Gradient Algorithms for Stochastic Composite Nonconvex Optimization and Policy Optimization*.

### INFORMS Annual Meeting 2020 Virtual

Nov. 2020

Title: *A Hybrid Stochastic Policy Gradient Algorithm for Reinforcement Learning*.

### INFORMS Annual Meeting 2019 Seattle

Oct. 2019

Title: *ProxSARAH: An Efficient Algorithmic Framework for Stochastic Composite Nonconvex Optimization*.

## SKILLS & QUALIFICATIONS

---

Technical	Python, Tensorflow, Keras, Pytorch, Scikit-learn, C/C++, Matlab, Data Structures & Algorithms
Other skills	Linux Development Environment, Robotics, Embedded Systems

## HONORS & AWARDS

---

### IBM Outstanding Technical Achievement Award

2026

NL2Insights Impacting Products and Clients

### IBM Growth Award

2025

Advancing Text2SQL service within watsonx.data intelligence

### IBM Research Accomplishments

2025

NL2Insights: Product and Client-0 Adoption & Impact (A-level)

<b>IBM Outstanding Technical Achievement Award</b>	2025
<i>IBM Granite Text-to-SQL: BIRD Leaderboard First Place</i>	
<b>IBM Research Accomplishments</b>	2024
<i>IBM Granite Fine-tuned Text-to-SQL Models Sweep Top Spots in BIRD Leaderboard (A-level)</i>	
<b>IBM Research Pat Goldberg Memorial Best Paper</b>	2022
